

P&H MinePro: Product stacker for Comalco, Queensland (2004)

A product stacker for Comalco's bauxite operation in Weipa, Queensland was dispatched in July 2004.

The structure was manufactured locally and assembled at the Common User Facility (CUF) by P&H MinePro and Krupp Australia.

The companies used both the main fabrication hall and the adjacent service areas.

The work undertaken at the CUF involved a mix of structural, mechanical and electrical work, which was all completed in a timely manner to meet the transportation schedule.
