Paramount: Laydown storage for Burrup Fertiliser ammonia plant (2005)

Burrup Fertilisers completed the world's largest Greenfield ammonia plant on the Burrup Peninsula, near Karratha in 2006.

The plant will produce around 760,000 tonnes of liquid ammonia annually for export world-wide.

In 2005, the laydown area at the Common User Facility (CUF) was used by Paramount for storage handling and consolidation of plant material for the project.
