TS7: Subsea pipe spool fabrication and assembly

Technip Subsea 7 Asia Pacific (TS7) utilised the AMC - CUF to complete the fabrication and assembly of a pipe spool for Woodside Energy Ltd's Enfield oil and gas development.

The CUF's extensive laydown area was utilised to fabricate the frame on-site as the spools were assembled. The complete module was then loaded onto a barge at the CUF's heavy loadout wharf for transportation to the field located off North West Shelf in Western Australia.

TS7 also recently utilised the CUF to store and maintain equipment to support flexible pipelay operations. A large reel of flexible flowline was offloaded at the CUF for maintenance prior to installation on the seabed
