

Voest-Alpine: Iron ore ship loader for Rio Tinto, Dampier (2004-2005)

The ship loader was one of two planned for the Dampier Port export facility upgrade for Rio Tinto.

Manufactured by Voest-Alpine, the company used the Common User Facility (CUF) laydown area for final assembly and loadout across the southern wharf.

Loadout and delivery of the first ship loader was completed in March 2005.

The second followed in November 2005.
