FMC Technologies

FMC Technologies provides maintenance and aftermarket support in Western Australia for subsea modules used by the offshore oil industry.

In 2008 FMC Technologies commenced a refurbishment of Woodside's Enfield subsea tool packages at the AMC-CUF.

FMC Technologies has a project based agreement to use the AMC-CUF's small fabrication hall and the company is looking to secure and build permanent, purpose-built subsea maintenance and test facility in the new Subsea Cluster development within the AMC's Fabrication Precinct adjacent to the AMC-CUF.
