ThyssenKrupp: Coal Loaders for Port Waratah

The AMC-CUF provided vital infrastructure and lay-down capacity for ThyssenKrupp Engineering Australia to assemble two coal loaders for Port Waratah Coal Services Limited.

Shipped to the Port of Newcastle in New South Wales at the start of February, components of the two coal loaders were transported to the AMC-CUF for painting and assembly taking approximately seven months to complete.

Port Waratah Coal Services Limited operates some of the world's largest and most efficient coal handling infrastructure.
