Alinta: Storage for Dampier to Bunbury pipeline expansion project

Alinta is making full use of the CUF's large laydown area to store more than 38km of steel pipe which will be used for part of the \$430m Dampier to Bunbury Natural Gas Pipeline expansion project.

The pipe is destined for two sections of the expansion stretching 23km south from Kwinana and 15km south from a site near Gingin.

Each length of pipe is around 17 metres in length with a 26-inch diameter, weighing around 3 tonnes. The total weight of pipe stored at the CUF exceeds 6000 tonnes.
